Ben -

Steve Paulsen has not gotten back with me. However, I've not looked at all of the files in the NARS sharefile ftp site...they are each in a tab file which takes a bit of time to access. Since you've not been provided an access account, please use mine: www.nars.sharefile.com; email: forrestjohn@sbcglobal.net; password: Alexis+3085. If you are short of time and prefer that I access each file to determine if it contains the metric information, please let me know and I will proceed accordingly. I have sent a follow-up email to Steve as to where the metrics may reside since the NRSA Report has been drafted which means the metrics should have been calculated.

I got your email regarding the NMED files and data. If you need me to take the time to calculate the summary information on the sonde data, please let me know since I will schedule the time.

Subject: Periphyton metrics

Hi Forrest;

Did you get in touch with the NRSA folks about data access? I already have that issue resolved, but now am wondering if periphyton metrics have already been calculated so that I don't have to do it again, or if an index has been developed that we could try to associate with nutrients. I would be glad to track it down myself, but thought you had already established contact.
Thanks!
